

Scoping Review

A scoping review exploring the diagnosis and treatment of functional neurological disorder/conversion disorder: consultation exercise

A scoping review exploring the diagnosis and treatment of Functional Neurological Disorder/Conversion Disorder (FND/CD) is currently being conducted by researchers based at the University of York (led by Prof. Christina van der Feltz-Cornelis).

We are currently conducting a consultation exercise where relevant stakeholders are asked to provide key references, as well as valuable insights, to the review and FNDS members are being invited to contribute. The researchers are looking for any records focused on the diagnosis and treatment of FND/CD that cannot be found on PubMed. This includes:

- White papers/ Government papers
- Clinical guidance (e.g., short articles from NORD, guidance created by healthcare services)
- Newly published/soon to be published peer reviewed articles

If you are aware of any references that fit the criteria or would like to provide valuable insights about the diagnosis and treatment of FND/CD, please add them to the review's Google document: <https://docs.google.com/spreadsheets/d/1jGdIxlqXrOW1u7jpBUSemm0T9iVt5S9qW6AMJTJGYd8/edit?usp=sharing> or send them to Danielle Varley at Danielle.varley@york.ac.uk.
